

What I claim and desire to secure by Letters Patent is:

1. A method for editing document information in a computer-stored document comprising:

- transferring the document information of the document to a printing device which is capable of printing document information on a surface which is provided with a position-coding pattern,

- receiving editing information from a reading device capable of reading position information from the position-coded surface,

- interpreting the editing information,

- changing the document information in dependence on the interpretation of the editing information.

2. A method according to claim 1, wherein the editing information comprises position information related to the position of the reading device on the surface, and wherein the interpretation of the editing information comprises interpretation of the position information.

3. A method according to claim 2, wherein the position information is in the form of sequences of coordinates which form manually generated curves which have correspondence in the form of drawn curves on the printed document.

4. A computer program which is stored on a storage medium which can be read by a computer and which com-

(continued claim 4)

prises instructions for causing a computer to execute the method according to one any of claims 1-3.

5. A system for editing document information in a document, comprising:

- storage means for storing the document,
- means for transferring the document information of the document to a printing device which is capable of printing document information on a surface which is provided with a position-coding pattern,
- means for receiving editing information from a reading device capable of reading position information from the position-coded surface,
- means for interpreting the editing information,
- means for changing the document information in dependence on the interpretation of the editing information.
